(57) Abstract :

A thin film solar cell module and a method of manufacturing a thin film solar cell module. A thin film solar cell module includes: a thin film solar cell including a first substrate, and a first electrode layer on the first substrate; a second substrate covering the thin film solar cell; and a sealing tape between the thin film solar cell and the second substrate, the sealing tape including a first adhesive layer having a conductivity and being attached to an edge portion of the first electrode layer; a metal layer on the first adhesive layer; and a second adhesive layer on the metal layer and attached to the second substrate.
